### Brief description of the Institution:

The Institute of Chemical Research of Catalonia -ICIQ- ([www.icq.es](http://www.icq.es)) started its research activities in 2004. ICIQ is a research centre of excellence accredited with the Severo Ochoa award and it is a member of the recently founded Barcelona Institute of Science and Technology ([www.bist.eu](http://www.bist.eu)).

ICIQ is one of the top level institutions for chemical research and has become an internationally recognised leading institution in the field of chemistry, as demonstrated by its participation in 46 projects from FP7 and H2020 programmes, including 15 ERC projects and 4 ITN networks. ICIQ is also very successful in obtaining MSCA-IF with 9 MSCA fellows from the H2020 framework programme.

The Institute is committed to performing research at the frontiers of knowledge in the areas of Catalysis and Renewable energies and steering the technological transfer of knowledge to the chemical and energy sectors by training the next generation of scientists through our high-quality educational programmes.

### Brief description of the Centre/Research Group (including URL if applicable):

The [research group of Prof. A. Llobet](#) carries out research in the field of redox catalysis using transition metal complexes. They are interested in the oxidation and reduction of both organic and inorganic substrates, and mainly those that are of technological interest. Their overall objective is to understand the various factors that affect catalyst's efficiency and selectivity with special focus to the transition metal electronic structure and space disposition.

Particular attention is being paid to the catalytic oxidation of water to molecular dioxygen, given the implications of this reaction for new energy conversion schemes based on artificial photosynthesis. The final objective of this route consists in the photo-production of hydrogen from water and sunlight.

### Project description:

A competitive project that merges Prof. Llobet group's expertise and the candidate's research experience aiming at high impact results to advance the knowledge of the molecular science related to photoinduced catalytic water oxidation and proton reductions.

### Applications

The following information should be submitted in English:

- Cover letter indicating research interests
- A full CV (including publications)
- A brief summary of the research project they would like to develop at ICIQ
